
New Symbiotic Podcast Episode

Huck Scientists Map Out the Drivers of Spillover

On this episode of [The Symbiotic Podcast](#), three members of our Center for Infectious Disease Dynamics evaluate the origins of COVID-19 and piece together a bigger picture of how and why new viruses like SARS-CoV-2 emerge and spill over from other species to our own. Guests Maciej Boni, Sagan Friant, and Peter Hudson are each actively engaged in ongoing international efforts to better understand the social, biological, and environmental factors at play.
